

REST-for-Physics Framework

3.0 Before we start

26.01.2023 - Javier Galan - javier.galan@unizar.es

- There were recent contributions to the framework necessary for running the examples that we will run during the session today.

Thus you will need to update your local copy of REST-for-Physics and recompile it.

```
cd framework/  
git pull  
python3 pull-submodules.py --latest --onlylibs  
cd build  
cmake ..  
make -j4 install  
source ../install/thisREST.sh
```

The output will help you understand if you are in the latest version of the framework.
